Nationality: Indian

Personal Profile

Software Engineer with strong foundations in Python, SQL, and Object-Oriented Programming. Passionate about building scalable applications and exploring cybersecurity concepts. Seeking an internship opportunity to apply problem-solving skills and contribute to real-world software development.

Education

B.Tech 3rd year

Shri Mata Vaishno Devi University

CGPA: 6.89

Experience

May 2025 – July 2025: Cybersecurity Intern

NIT Srinagar

- Intern under Dr. Sparch Sharma
- Worked on tools like Wireshark, Nmap, and BurpSuit.

Sept 2023 – May 2024: Software Engineering Intern

Tech Company, Location

- Programmed C# and C++ middleware for automated hardware validation systems.
- Optimized legacy GUI modules, resulting in improved system response times during testing.
- Collaborated with the systems team to integrate firmware updates for semiconductor equipment.

Projects

Automated Mobile Vulnerability Scanner

- AI-based mobile application vulnerability scanner that combines static and dynamic analysis with machine learning to detect security flaws, assign risk scores, and generate automated remediation suggestions with explainable insights.

Network Traffic Analyzer

- Network Traffic Analyzer capable of capturing, monitoring, and analyzing real-time network packets to identify patterns, anomalies, and potential security threats. Implemented packet inspection techniques to extract key information such as IP addresses, protocols, ports, and data flow statistics. Integrated filtering and logging mechanisms to track suspicious activities and visualize network behavior. Utilized Python-based networking libraries and various other security tools.

Skills

Python, C/C++, Linux (Ubuntu), Wireshark, Nmap, SQL, MySQL, TCP/IP, ports, protocols, security tools, Git/GitHub, JavaSc
